

## **Pregnancy, breast feeding and Contraception**

For the majority of women, migraines improve during pregnancy

Caution is advised when considering taking medication in pregnancy, breast feeding, and when considering contraception.

The resource Best Use of Medicine in Pregnancy (BUMPS) may be of help to patients

(<http://www.medicinesinpregnancy.org/>)

Your doctor may also check with British National formulary data and pregnancy register.

In general terms:-

Paracetamol is not considered to be associated with a significantly elevated risk throughout pregnancy and lactation
